## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 16 is rejected under 35 U.S.C. 102(b) as being anticipated by cited reference JP 11-118348. The Japanese reference discloses a refrigerator comprising a main body with a storing compartment provided in the said main body, having a cover/door for access to storing compartment, an electrical component box capable of moving in and out from said main body and situated at mid level within said storing compartment (see figure 6).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11-118348 in view of "Official Notice" The Japanese Patent Application discloses the claimed invention as stated above with the exception of a drainage passage within a electric component box. It is well known in the art to utilize a drainage passage within a electric component box for removing moisture and condensation and preventing

damage to electrical components within such an enclosure. It would have therefore been obvious to one skilled in the art to modify the disclose of the said Japanese Patent Application with such a well known feature for remove condensation and preventing electric component damage.

***Allowable Subject Matter***

**Claims 2-14 are allowed over the prior art of record.**

Claims 17-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
